

## Cam-Immune Can Help in Keeping the Infections at Bay

### Description

## A Claim by Dr. Millie Hinkle, USA

I am astounded at how fast the variants of Covid are spreading. I have patients who have had Covid last year and both vaccines this year and now they are very ill with the delta variant. I am so sad because I have tried to get government funding to develop Cam-Immune.

*What is CaM? it is the abbreviation of camel milk*

## Cam- Immune Have Proven to Support the Immune System

Cam-Immune can be taken by mouth but I am also able to develop it into a nasal spray. The high levels of antioxidants, antibodies, etc in Cam- Immune have proven to support the immune system against the Covid variants.

## Natural Feed Formula

My all natural formula that I feed the camel increases specific enzymes that fight against Covid. <https://camel4all.info/index.php/2021/07/29/a-claim-100-natural-feed-for-camels/> The virus cannot replicate. But also one of the most amazing facts is that the camel themselves are protected against Covid, Sars and Mers. I desperately want to help everyone around the world as well as the camel with my Cam-Immune but simply cannot go forward without funding to mass produce this not as a drug but as a nutraceutical. This is good because it does not have to be on a wait list by the FDA. It is a therapeutic approach to Covid and the variants.

Why we not give a chance to natural formula, easy applicable and no side effects and no hesitation from the people.

*Dr. Raziq Kakar*
