
The Palestinian Scientist who Discovered Camel Milk is a Billion Dollar Beauty Formula

Description

Before being crowned one of Arabia's most influential Arabs, Shihab used to wear a lab coat, leading cancer research at DAKO Industries. For 3 years, Shihab tried to develop monoclonal antibodies that can cure cancer, and failed, but it was also during her time as a researcher for the pharmaceutical giant that the Cambridge graduate first struck gold. "One day, a Bedouin man came by my office, and we were talking, and he told me that his daughter was cured because she only drank camel milk," she recounts. "So I tell my professor, who is also the director of Cambridge University's Institute of Biotechnology, about the encounter and how I'm curious to know more about the therapeutic properties of camel milk, so he encourages me to study it."
