

The Secret Power is in the Camels'™ Genes

Description

The drive behind the camel domestication was a set of goals to achieve through this incredible animal, the camel; an animal that can produce food in a challenging scenario. These challenges were comprised of bad weathering, scarcity of food & water, and long traveling for different purposes.

The wise cameleers selected the incredible camel to achieve this set of tasks to ensure food security and livelihood in the world's driest landscapes. The secrets of the potential both as qualitative and quantitative traits are treasured in their genes. The camel can play a very multi-dimensional role for the betterment of the human being and Mother Earth. Camel4life international is an advocacy forum promoting camel at the global level to convince the policymakers and other stakeholders to use the camels as an agent for development and food security.

Some days before I and Dr. Ulri were interviewed by Daniel Bardsley and published in the National Newspaper of the UAE. Here is the link to the interview in the following. <https://www.thenationalnews.com/uae/environment/its-in-their-genes-saudi-study-seeks-to-analyse-how-camels-cope-with-extreme-temperatures-1.1140431>
