

Researching Camel Milk as an Antiviral Agent in the Context of COVID-19

Description

A Novel Idea

The abstract of the whole talk is based on a novel idea to study the repercussions of camel milk on the treatment and control of COVID-19. I'm quite confident that this idea will work and will save precious human lives in a short period of time. Camel milk boosts immunity, flush body from toxins & oxidants, and kills the microorganisms in the body. There are many valid reasons behind such claims and suggestions, which you can read in the following paragraphs.

CaM is a Natural Pharmacy

Camel is a strange and unique creature and the camel products are very exclusive, especially the white gold milk. Camel milk which I abbreviate as CaM has tremendous potential to naturally heal human bodies from different complex ailments and wash it from poisons. The power to heal complex ailments is coming from the specially designed molecules which work as natural medicine, hence CaM is known as a natural [pharmacy](#).

The CaM had been using as a natural elixir since unknown times by the people in Asia and Africa. The camel keepers in the far and wide regions had been using camel milk for the treatment of different disease conditions. The Bedouins had been using camel milk to treat viral diseases like hepatitis hundred of years before. <https://medium.com/@raziqarkbiodiversity/traditional-use-of-camel-milk-and-liver-health-hepatitis-c502edde855c>

Miraculous Molecules in Camel Milk

The findings of different studies available in scientific literature revealing the role of CaM as a healing agent. CaM is fortified with special ingredients like protective proteins (lactoferrin, lactoperoxidase, immunoglobulins), micro minerals, vitamins, and lysozyme, making CaM a super antidote against infectious diseases. CaM's medicinal properties covering a wide range of ailments as; autoimmune diseases, allergies, asthma,

rashes, diabetes, liver disorders, rheumatism, inflammatory conditions, piles, urethral irritation, infectious diseases, stress/depression, peptic ulcers, and even cancer.

Ongoing Studies

The miraculous potential of CaM is not claimed only based on the traditional knowledge and the novel molecules in its composition but many invitro and invivo studies have proved the worth of the CaM as antiviral, antibacterial, antifungal, anticancerous and supportive therapy in diabetes and other convoluted diseases. As for as I know, there are many ongoing and planned studies on CaM to understand the pathways of its mode of action and the diseases which can be treated/facilitated with the camel milk. The author is part of some studies thematic areas to study the awesome properties of CaM in human health. Very new updates are the emerging themes claiming CaM enriches the gut microbiome and enhance its healing power and the overall resistance of the body to different ailments.

Conclusion

As we are convinced that nature is perfect and provides solutions to complex situations, so the natural product like camel milk should be given a chance to study if it works against the COVID-19 virus or not. Nature has never unearthed a snag unless an antidote has not engineered within the natural resources. I strongly believe in this philosophy.
