Why We Celebrate a World Camel Day?

Description

Camel4All.info

The Longest and Hottest Day is a Camel Day (22 June)

Camel is a multipurpose, unique, and very useful animal for livelihood earning in the challenging climatic conditions of its habitats. Because of the towering power of adaptation, the camel ensures food security in conditions where other types of livestock can hardly survive. Camel is an efficient biological machine, converting poor roughages (shrubs, bushes, and dry foliage) into precious milk while consuming a lesser amount of water/kg milk production. The camel extracts water from its excreta and produces an almost dry and hard manure ball, as well as an extract from the urine via its incredible kidneys, producing urine thicker than syrup. Camel produces milk with medicinal and functional properties, rightly called a natural pharmacy. Camel also provides fiber, hides, recreation, sports opportunities, transportation & accessibility to millions of people around the world. The camel plays an incredible role in dispersing seeds, enriching soil fertility, recycling the woody roughages into manure (food for the soil microbiome), and overall ecosystem management.

We celebrate World Camel Day to highlight the camelâ€™s importance and usefulness among researchers, policymakers, and other stakeholders

Besides the above-discussed potential and opportunities, the camel is still hiding from the eyes of the policymakers. Camel is seldom considered in R&D policies, both locally and globally which is very unfortunate. Camel4Life International is an influential forum advocating camel at the global level, with a workforce of caramelized (camel scientists, nomads/pastoralists, farmers, students, lovers) from all over the world.

We celebrate World Camel Day each year on the 22nd of June to highlight the importance of an incredible camel and aware/educate the masses about the role of the camel in food security, climate change adaptation, culture, and ecosystem management. Each year, this day is celebrated in many parts of the world and the interest is increasing with the passing of each camel day. **Dr. Abdul Raziq Kakar** (author) is the founder and author of the world camel day.

Who is the founder of World Camel Day?

- Founder of World Camel Day

The interest of the people beyond the camelsâ€™ habitats is also increasing and the demand for camel milk is increasing with the passage of time. More and more people are coming into the camel milk and sports business. We can see camel dairies in Western countries and regions like USE, Australia, and the European Union. Also, now we have camel racing in France and Australia, and soon more countries will enter the ring. The celebration of camel day is a success story and great support for the camel development.
