The hottest and challenging day is a camel day

Description

Camel4All.info

Right now Iâ€™m going back home from the desert camel farm. I met by chance at a grazing and roaming camel herd. It is 3 p.m. on 22 June 2023 (World Camel Day), the longest and one of the hottest days of the year. It is 45 C. You can see the camels grazing on highly adapted shrubs/bushes enjoying the challenging weather (absorbing heat now which will dissipate in the night). Iâ€™m talking from my car and making a video, already released on the YouTube channel ***Camelogist***.

> From the field at the eve of World Camel Day 2023

In 2009, the author conceptualized the idea of a World Camel Day (WCD) to aware people of the importance of camels as food security agents in climate change scenarios. Here is the link to read about the history of World Camel Day.

> The history of World Camel Day

Why do we choose the date of 22nd June as World Camel Day?

In the original habitat of camel (Arabian Peninsula), 21 June is the longest and hottest day of the year. Camel sustains its performance in such harsh and hostile environments.
